

Solutions to Past Paper Questions – Upper and Lower Bounds

19) (a) $4.5 \times 6.5 = 29.25$

(b) $\frac{3.5}{6.5} = 0.538$ (3sf)

20) (a) Upper bound of volume = $\frac{1}{3} \times 230.5^2 \times 146.5 = 2594527 \text{ m}^3$

Lower bound of volume = $\frac{1}{3} \times 229.5^2 \times 145.5 = 2554507 \text{ m}^3$

Difference = $40020 = 40000 \text{ m}^3$ (to 3sf)

16) (a) $1.65 \leq r < 1.75$ $30.95 \leq R < 31.05$

(b) Lower bound of $R - r = 30.95 - 1.75 = 29.2$

(c) Lower bound of volume of large sphere = $\frac{4}{3} \times \pi \times 30.95^3$

Upper bound of volume of small sphere = $\frac{4}{3} \times \pi \times 1.75^3$

Divide these to get 5531

19) Area of whole sheet = $12.5 \times 10 = 125 \text{ cm}^2$ (these measurements were given exactly)

To get greatest possible amount of waste we need least possible area of trapezium.

This is $\frac{1}{2} \times 9.65 \times (8.65 + 11.35) = 96.5 \text{ cm}^2$

So greatest possible waste = $125 - 96.5 = 28.5 \text{ cm}^2$

18) (a) Upper bound for area = $\frac{1}{2} \times 83.5 \times 95 = 3966.25 \text{ mm}^2$

(b) Lower bound for $\tan x = \frac{85}{83.5} = 1.0179 \dots$

(d) To 2sf, UB = 52000 mm^3 and LB = 46000 mm^3 which are not the same.

To 1sf, both UB and LB are 50000 mm^3 , so the appropriate degree of accuracy is:

Volume = 50000 mm^3 to 1sf

Answer is asked for in cm^3 , so convert to **50 cm^3 (1sf)**

9) (a) $\frac{BD}{120} = \tan 15^\circ$

$BD = 120 \times \tan 15^\circ = 32.15$

$CD = 148 - BD = 116 \text{ cm}$ to nearest cm

(b) Use BC = 147.5cm, AB = 120.5cm, angle DAB = 15.5°
