

VOLUME OF PRISMS AND CYLINDERS

Note Title

01/10/2008

A PRISM is a 3D shape (a solid) with a CONSTANT CROSS-SECTION
ie/ if we cut it anywhere along its length, the cut surface is the same.

$$\text{Volume of Prism} = (\text{Area of cross-section}) \times (\text{length})$$

"length" may be "height" if the prism is standing on end

Example

Find the volume of this girder.

$$\text{Area of A} = 15 \times 7 = 105 \text{ cm}^2$$

$$\text{Area of B} = 12 \times 5 = \underline{60 \text{ cm}^2}$$

$$\text{Area of cross-section} = 165 \text{ cm}^2$$

$$\begin{aligned} \text{Volume} &= 165 \text{ cm}^2 \times 200 \text{ cm} \\ &= \underline{\underline{33000 \text{ cm}^3}} \end{aligned}$$

A CYLINDER is a prism with a circular cross-section.

So its volume is

$$(\text{area of cross-section}) \times (\text{height})$$

So

$$V = \pi r^2 h$$

The curved surface area of a cylinder becomes a rectangle when unfolded.

$$\begin{aligned} \text{Its area} &= \text{Circumference} \times \text{height} \\ &= \pi d \times h \\ &\text{or } 2\pi r h \end{aligned}$$

Example A tin has a radius of 4cm and a height of 10cm.

(a) Find its volume

$$\begin{aligned} V &= \pi \times 4^2 \times 10 \\ &= \underline{502.7 \text{ cm}^3} \end{aligned}$$

(b) Find its total surface area

$$\underline{\text{Curved SA}} = \pi \times 8 \times 10 = 251.3 \text{ cm}^2$$

$$\text{Area of top} = \pi \times 4^2 = 50.3 \text{ cm}^2$$

$$\text{Area of bottom} = \pi \times 4^2 = 50.3 \text{ cm}^2$$

$$\underline{\text{Total surface area}} = \underline{351.9 \text{ cm}^2}$$
